KARAN DAVE, 26070122507, CSE B3, 2025-2029

ASSIGNMENT No: 13

TITLE: Write a Java program to perform reading from and writing to a file using file handling operations.

Problem Statement

Write a Java program to perform reading from and writing to a file using file handling operations.

Learning Objectives

To perform file reading and writing operations using Java file handling classes.

Theory

Java provides file handling through the `java.io` package. Classes such as `File`, `FileReader`, `FileWriter`, `BufferedReader`, and `BufferedWriter` are used to perform input and output operations. File handling enables permanent storage and retrieval of application data. Proper exception handling is necessary to manage file-related errors. These concepts are essential for data persistence.

Exercise

1. Create a program to write and read employee details from a file.

Input

```
1 import java.io.FileWriter;
2 import java.io.FileReader;
3 import java.io.BufferedReader;
4 import java.io.IOException;
5 public class EmployeeFile {
6     public static void main(String[] args) {
7         String fileName = "employee.txt";
8         // Writing employee details to the file
9         try {
10             FileWriter writer = new FileWriter(fileName);
11             writer.write("Employee ID: 101\n");
12             writer.write("Employee Name: Karan\n");
13             writer.write("Department: Computer Engineering\n");
14             writer.write("Salary: 500000\n");
15             writer.close();
16             System.out.println("Employee details written to file successfully.");
17         } catch (IOException e) {
18             System.out.println("Error while writing to file.");
19         }
20         // Reading employee details from the file
21         System.out.println("\nEmployee Details:");
22         try {
23             FileReader reader = new FileReader(fileName);
24             BufferedReader bufferedReader = new BufferedReader(reader);
25             String line;
26             while ((line = bufferedReader.readLine()) != null) {
27                 System.out.println(line);
28             }
29             bufferedReader.close();
30         } catch (IOException e) {
31             System.out.println("Error while reading from file.");
32         }
33     }
34 }
```

Employee details written to file successfully.

Employee Details:
Employee ID: 101
Employee Name: Karan
Department: Computer Engineering
Salary: 500000

2. Create a Java program to write patient details (patient ID, name, age, and diagnosis) to a file and read the details from the file for display.

Input

```
1 import java.io.FileWriter;
2 import java.io.FileReader;
3 import java.io.BufferedReader;
4 import java.io.IOException;
5 public class PatientFile {
6     public static void main(String[] args) {
7         String fileName = "patient.txt";
8         // Writing patient details to the file
9         try {
10             FileWriter writer = new FileWriter(fileName);
11             writer.write("Patient ID: 201\n");
12             writer.write("Patient Name: Karan\n");
13             writer.write("Age: 18\n");
14             writer.write("Diagnosis: Fever\n");
15             writer.close();
16             System.out.println("Patient details written to file successfully.");
17         } catch (IOException e) {
18             System.out.println("Error while writing to file.");
19         }
20         // Reading patient details from the file
21         System.out.println("\nPatient Details:");
22         try {
23             FileReader reader = new FileReader(fileName);
24             BufferedReader bufferedReader = new BufferedReader(reader);
25             String line;
26             while ((line = bufferedReader.readLine()) != null) {
27                 System.out.println(line);
28             }
29             bufferedReader.close();
30         } catch (IOException e) {
31             System.out.println("Error while reading from file.");
32         }
33     }
34 }
```
